SUMMARY

Computer Science undergraduate at KMIT (CGPA: 8.01/10) with hands-on experience building and shipping full-stack systems and ML inference pipelines. Proficient in data structures, algorithms, and OOP — 380+ LeetCode/GFG problems solved. Built production systems covering REST APIs, JWT authentication, RBAC, CI/CD automation, and containerized deployments on GCP. Comfortable with ambiguity, fast iteration, and owning projects end-to-end.

TECHNICAL SKILLS

- **Languages:** Java (OOP, Collections, Multithreading, Exception Handling), Python, JavaScript (ES6+), TypeScript, SQL, C
- **Backend:** Node.js, FastAPI, Spring Boot (basics), REST APIs, JWT Authentication, RBAC
- **Frontend:** React, Next.js, Tailwind CSS, HTML/CSS
- **Cloud & DevOps:** AWS (familiar), GCP, Docker, GitHub Actions (CI/CD), Firebase, Git
- **Databases:** PostgreSQL, MongoDB, MySQL, Firestore
- **AI/ML:** PyTorch, TensorFlow, NLP, Computer Vision, OpenAI API

PROFESSIONAL EXPERIENCE

Full Stack Developer (Freelance)

May 2024 – Sep 2024

MediTrack, Hyderabad

- Reduced deployment failures by **90%** by architecting GitHub Actions CI/CD pipelines and Docker containerization for backend services on GCP.
- Implemented RBAC and JWT authentication securing patient data across web and mobile platforms, supporting multi-role access for doctors, nurses, and admins.
- Digitized hospital intake workflows, eliminating manual data entry errors and significantly reducing average intake processing time.
- Collaborated with product and QA teams in Agile sprints — sprint planning, code reviews, and iterative delivery cycles.

PROJECTS

AI-Powered Blog Enhancement Platform

- Built a MERN-stack content platform integrating OpenAI APIs for text summarization and grammar correction, reducing author editing effort.
- Designed a content recommendation engine using user interaction history (views, likes, read-time), improving content discoverability and session depth.
- Implemented JWT-based authentication with role-based content management (admin, author, reader), ensuring secure, scoped access across the platform.

Deepfake Detection System

- Trained an EfficientNet-based CNN using PyTorch on labeled real and manipulated media; built async FastAPI inference service with end-to-end latency under 3 seconds.
- Wrote unit tests covering core inference logic and documented all API endpoints for reproducibility and maintainability.

CRISPR Gene Analysis Platform

- Built a full-stack platform using Next.js and FastAPI for CRISPR-Cas9 data visualization; designed normalized PostgreSQL schemas for genomic datasets.
- Containerized the entire application with Docker for reproducible, environment-agnostic deployment and interactive mutation distribution dashboards.

EDUCATION

B.Tech. in Computer Science and Engineering

July 2023 – June 2027

Keshav Memorial Institute of Technology, Hyderabad

CGPA: 8.01/10

ACHIEVEMENTS

- Earned **Oracle Cloud Infrastructure (OCI) AI Foundations Associate** Certification.
- Solved **380+ DSA problems** on LeetCode and GeeksForGeeks; earned the 100 Days Badge for consistent streaks.
- Attended Google DevFest workshops on Agentic AI with Gemini SDK — hands-on experience with LLM agent patterns.
